* These reports by Lorenz, et al. (in German and English) demonstrate that no EBDCs are transferred into mainstream smoke as the unchanged pesticide.

* Additionally, these radioactive labelling studies indicate that the transfer rate for EBDC degradation products from cigarette tobacco is 12.8%.

* From Chemosphere, 12(2), 1983 page 272 (Table 1); distribution of EBDC (maneb) to mainstream smoke:

| | |
|---|---|
| Unchanged EBDC: | not detectable |
| Pyrolysis Products: | 11.5% |
| $CO_2$: | 0.7% |
| Unknown: | 0.6% |
| | 12.8% total |
